

Our Vision and Principles of Science

Science is good at our school when...

We build on and develop children's vocabulary, knowledge and understanding, and scientific skills.

Lessons are collaborative, investigative and practical, relating to real life experiences that are relevant to the children.

We capture the children's curiosity, allowing them to be inquisitive, explorative and independent.

Our vision is to make science teaching and learning *exciting* and *engaging*.

Children explore concepts and real life experiences using a practical 'hands on' approach that helps them to develop a *lifelong* love of science.

Children use a wide range of resources that enhance their learning, including inspirational visitors, trips and the outdoor learning environment.
